Ideation Phase

Define the Problem Statements

Student Name: [ENTER_STUDENT_NAME]	**Enrollment No:** [ENTER_ENROLLMENT_NO]	**Maximum Marks:** 2 Marks
College / Institute: [ENTER_COLLEGE_NAME]	**Team / Student ID:** [ENTER_TEAM_ID]	**Submission Date:** [DATE]
Project Title: FORMULA 1 Race Intelligence Dashboard Analysis Report (2010 – 2026)		**Domain:** Data Analytics with Tableau

Customer Problem Statement Template

A well-articulated customer problem statement allows our analytics engineering team to craft targeted visual solutions addressing real pain points faced by motorsports decision-makers across mid-tier strategy, sports media broadcasting, and regulatory compliance.

PS ID	I am (Customer)	I'm trying to...	But...	Because...	Which makes me feel...
PS-01	**Rajan** F1 Performance Strategist at a mid-tier constructor	Benchmark championship trajectory against Red Bull & Mercedes, optimize tyre pit-windows, and recruit top talent	Multi-table lap times, tyre deg, and points data are siloed and difficult to cross-correlate	The points gap to top teams averages 498 points and tyre cliff errors result in severe undercut loss	Strategically vulnerable and under-prepared against factory teams
PS-02	**Divya** Motorsport Broadcast Analyst at sports media network	Produce rapid on-screen infographics, all-time driver leaderboards, and podium distributions for live television	Manual historical calculations across 17 seasons are slow and prone to on-air statistical errors	Live broadcast demands instant visual telemetry and high-impact historical context	Pressured during live pre-race and post-race broadcast segments
PS-03	**Arvind** FIA Technical Regulation Compliance Analyst	Audit DNF causes and evaluate whether technical regulations have improved grid reliability and powertrain safety	Retirement classifications are scattered across unstructured race incidents and failure reports	Regulatory evaluations require historical proof of mechanical failure reduction across engine eras	Uncertain whether regulation changes delivered intended safety and reliability improvements
