Problem-Solution Fit Phase-III

Problem-Solution Fit Document

Student Name: Pranay Patil	**Enrollment No:** EN25EL3010049	**Maximum Marks:** 2 Marks
College / University: Medi-Caps University	**College Email:** en25el3010049@medicaps.ac.in	**Date:** October 2026
Project Title: FORMULA 1 Race Intelligence Dashboard Analysis Report (2010 – 2026)		**Domain:** Data Analytics with Tableau

Mapping Core Problems to Visual Analytics Solutions

This document demonstrates direct alignment between customer pain points and visual intelligence capabilities delivered in Tableau.

Scenario & Persona	Pain Point / Problem	Tableau Feature / Visual	Business Value Delivered
Scenario 1: Team Strategist (Rajan)	Uncertainty regarding mid-tier point gap to Red Bull and tyre degradation cliffs across track types.	**Visual 1:** Constructor Trajectory Benchmark. **Visual 2:** Tyre Compound Degradation Heatmap. **Visual 3:** Global Talent Scouting Map.	Quantifies 498-point deficit, validates 1-stop vs 2-stop strategy, and prioritizes recruitment from top nationality talent pools.
Scenario 2: Broadcast Media (Divya)	Lag in retrieving all-time driver rankings and host nation context during fast-paced live television broadcasts.	**Visual 4:** Driver Cumulative Leaderboard. **Visual 5:** Host Countries Grand Prix Distribution. **Visual 6:** Podium Achievement Share by Team.	Instant visual access to all-time stats (Hamilton 4,825 pts, Verstappen 3,110 pts), elevating television broadcast engagement.
Scenario 3: FIA Compliance (Arvind)	Lack of historical evidence proving whether hybrid and aero regulations improved grid reliability and reduced mechanical DNFs.	**Visual 7:** DNF Failure Classification by Era. **Visual 8:** Grid Reliability Progression (2010–2026). **Visual 9:** Driver Reliability Index.	Proves a 48% drop in mechanical failures, validating that engine quotas and safety mandates enhanced grid integrity from 81.8% to 92.4%.
